

Profile Summary:

- Senior FullStack Python Developer with 6+ years of experience in designing, developing, and deploying scalable web applications using Python, FastAPI, Django, ReactJS, Redux, and TypeScript.
- Strong experience in end-to-end software development including backend APIs, frontend architecture, database integration, cloud deployment, and DevOps automation.
- Hands-on experience with AWS services including EC2, Lambda, and S3 for application deployment, serverless execution, and file/object storage.
- Experienced in Azure DevOps, GitHub, Docker, CI/CD pipelines, build automation, and release management for production deployments.
- Proficient in building REST APIs, authentication flows, reusable UI components, state management, and scalable backend services.
- Good exposure to database technologies including PostgreSQL, MySQL, and MongoDB with experience in query optimization and data-driven application development.
- Strong understanding of Object-Oriented Programming, SOLID principles, Agile Scrum methodology, and Software Development Life Cycle.
- Experienced in collaborating with product owners, backend teams, QA teams, DevOps teams, and customers to deliver high-quality features on time.
- Skilled in debugging production issues, improving application performance, maintaining code quality, and reviewing peer code.
- Written unit test cases for features using Jest and Enzyme to improve quality and reduce defects.
- Proactive, ownership-driven, deadline-oriented developer with strong problem-solving and communication skills.
- Looking for a challenging full stack engineering role where I can contribute to scalable product development, cloud solutions, and organizational growth.
- Comfortable working in both individual contributor and collaborative team environments with ownership of full stack delivery.

Technical Skills:

Frameworks	FastAPI, ReactJS, Redux, Redux-Saga, LangChain,Django
Programming languages	Python, JavaScript, TypeScript
Database technologies	PostgreSQL, MySQL, MongoDB
Cloud technologies	AWS EC2, AWS Lambda, AWS S3, Azure
DevOps & CI/CD	Azure DevOps, Docker, GitHub, TeamCity, CI/CD Pipelines
Operating system	Windows

IDE's tools	Visual Studio Code
-------------	--------------------

Employment Details:

Organization	GSAPNN Technology
Period	Jan 2026 to till date
Organization	Tata Consultancy Services Ltd.
Period	Jan 2023 to Jan 2026
Organization	Protiviti
Period	Mar 2021 to Dec 2022
Organization	App's N Devices
Period	Mar 2020 to Feb 2021

Project Details:

Project#1

Title: Enterprise Application Development and Cloud Support

Role: Senior FullStack Python Developer

Technologies: Python, FastAPI, ReactJS, Redux, TypeScript, AWS EC2, AWS Lambda, AWS S3, Azure DevOps, Docker, GitHub

Duration: Jan 2026 to till date.

Client: GSAPNN Technology

Description:

Working as a Senior FullStack Python Developer responsible for developing scalable web applications, backend APIs, frontend features, cloud deployments, and DevOps automation. The role includes building backend services using FastAPI, developing responsive ReactJS interfaces, integrating databases, managing cloud infrastructure, and supporting CI/CD pipelines for reliable production delivery.

Responsibilities-

Developed scalable backend services and REST APIs using Python and FastAPI.

Built reusable, responsive, and performance-focused frontend components using ReactJS, Redux, and TypeScript.

Integrated frontend applications with backend APIs and handled request/response flows, validations, and error states.

Worked with AWS EC2 for application hosting and cloud-based deployment activities.

Used AWS Lambda for serverless processing and background task execution where required.

Managed application files and static assets using AWS S3 object storage.

Implemented Docker-based application packaging for consistent development and deployment environments.

Worked with Azure DevOps pipelines for CI/CD automation, build management, and release support.

Used GitHub for version control, branching, code reviews, and collaboration with team members.

Participated in debugging, production issue resolution, API performance improvement, and code quality improvements.

Project#2

Title: Weight and Balance Loadmaster

Role: FullStack Python Developer

Technologies: Python, FastAPI, ReactJS, Redux, AWS, REST APIs

Duration: Jan 2023 to Jan 2026.

Client: United Airlines

Description:

Weight and Balance Loadmaster is a web-based application used to validate aircraft containers, baggage carts, and load items. The system helps validate quantity, density, locking conditions, and aircraft weight balance rules before loading containers into aircraft. It supports operational safety by ensuring that container placement and total load calculations follow business and regulatory requirements.

Responsibilities-

Worked as a FullStack Developer in the Loadmaster and Weight & Balance team.

Developed frontend features using ReactJS and Redux based on user stories and business requirements.

Built and integrated backend APIs using Python and FastAPI for validation and data processing flows.

Implemented UI components for container validation, aircraft load details, and operational workflows.

Coordinated with service team and QA team to debug and close functional and integration issues.

Reviewed peer code and helped improve code quality, maintainability, and performance.

Participated in sprint planning, daily scrum calls, grooming sessions, and sprint retrospectives.

Followed coding standards, maintained good code coverage, and delivered assigned JIRA stories on time.

Supported cloud and DevOps-related deployment activities in coordination with the DevOps team.

Project#3

Title: Successware

Role: FullStack Developer

Technologies: Python, FastAPI, ReactJS, Redux-Saga, REST APIs

Duration: Mar 2021 to Dec 2022.

Client: Successware

Description:

Successware is a data-driven, cloud-hosted business solution software for small and medium-sized companies in trade industries such as HVAC, Plumbing, Electrical, Solar, Chimney Sweep, Septic Service, and Indoor Air Quality. The platform supports business operations through cloud-based web tools and mobile application workflows.

Responsibilities-

Developed dynamic web application features using ReactJS with reusable component-based architecture.

Integrated REST APIs and ensured smooth data flow between frontend and backend systems.

Worked on backend API logic using Python and FastAPI for business workflows and data handling.

Managed application state using Redux and Redux-Saga for asynchronous flows.

Conducted unit testing, debugging, and issue fixing to maintain high code quality.

Collaborated with designers, product managers, backend developers, and QA engineers.

Participated in Agile ceremonies including sprint planning, daily stand-ups, and retrospectives.

Prepared project documentation and supported knowledge sharing within the team.

Mentored junior developers and guided them on frontend and full stack development best practices.

Project#4

Title: Stucle

Role: Frontend Developer

Technologies: ReactJS, Redux-Saga, Sass

Duration: Mar 2020 to Feb 2021.

Client: App's N Devices

Description:

Stucle is an online study-circle platform used to manage online classes for different grades and subjects. It includes features such as live class scheduling, multimedia slides, MCQ integration, attendance tracking, homework assignment, grading, doubt resolution, uploaded notes/videos, and learning analytics dashboard.

Responsibilities-

Developed and maintained interactive web application screens using ReactJS.

Created reusable UI components for online classroom and education workflows.

Integrated APIs and handled frontend data binding, loading states, and error states.

Worked with Redux-Saga for asynchronous data flows and state management.

Participated in requirement discussions, sprint planning, and delivery activities.

Improved frontend performance and user experience across application modules.

Conducted testing and debugging to ensure stable and defect-free delivery.

Project#5

Title: Listdekhoo

Role: Frontend Developer

Technologies: ReactJS, Redux-Saga, Web API, Sass

Duration: Sep 2018 to Dec 2019

Description:

Listdekhoo is a mobile and web application built using React and React Native. It provides electrical tools, sockets, product price lists, and product details through an easy-to-use listing interface.

Responsibilities-

Developed and maintained product listing web screens using ReactJS.

Integrated Web APIs for product details and pricing information.

Implemented search, listing, and detail-view user interfaces.

Worked on UI optimization, bug fixing, and cross-browser compatibility.

Collaborated with team members for requirement understanding and timely delivery.

Education:

Master of Science (M.Sc) from Gayatri Institute of Science and Technology, Berhampur, Odisha
